PROFILE I FROM 45 TO 50" saprolite is weak, fine sandy loam, color pattern of parent rock. COLOR THROUGHOUT PROFILE IS DULL: yellow-brown, gray-brown, CONSISTENCE of sicl horizon is mfi to msfi. gleying along root channels beginning around 24". other low chroma mottling accompanies this, unclear if it is drainage and/or relic. Would require backhoe pits for saprolite parent rock identification for site classification if improvements permit was requested.

PROFILE II COLOR OF "A" HORIZON is gray-brown. COLOR (MATRIX) OF REMAINING PROFILE IS LIGHT YELLOW, LIGHT Y-BROWN. IN 20-30" HORIZON CLAY PEDS ARE DULL BR-YELLOW, AND NOTICED A FEW FINE CLEAR YELLOW-RED MOTTLES.
